Summary of Qualifications

Full Stack Software Engineer with professional experience since June 2022 (4 years), working in the **.NET** and **Node.js** ecosystems on both backend and frontend. Skilled at building scalable and robust systems for the **credit** market, with experience in **monolithic and microservices** architectures, covering all stages of the development lifecycle: planning, architecture, implementation, testing, monitoring, and support.

Experience

- **Software Engineer at Quick Soft Tecnologia (Blumenau, SC): Jun/2022 – Present**

- **Mid-Level Software Engineer: Nov/2025 – Present**

- In a role of greater technical responsibility, I took on more complex demands with increasing autonomy, maintaining involvement across all product projects, contributing to new projects, process improvements, and technical decisions, while also serving as a technical reference and code reviewer for the team.

- **Integrations:** Implementation of more than 9 integrations with financial market systems, including Brazilian banks with balance, statement, and PIX (Brazilian instant payment method) support, as well as B3 (Brazil's largest stock exchange) platforms, connecting the ERP to external systems and automating critical steps in the receivables anticipation flow.
 - **Code review:** Acted as code reviewer and technical reference for the team, participating in the review of between 5 and 10 pull requests per week, contributing to architectural standardization and delivery quality.

- **Junior Software Engineer: Apr/2023 – Nov/2025 (2 years and 7 months)**

- Full stack work on the legacy ERP (Qprof) and on projects with modern technologies, with growing technical ownership and involvement in system design decisions. Throughout the period, I delivered integrations, APIs, and improvements across multiple product fronts.

- **ERP Qprof:** Reduced ERP Qprof's debug startup time by ~75% (from ~4 to ~1 minute) by converting unnecessary synchronous routines to asynchronous and optimizing high-cost routines, boosting development team productivity.
 - **New Project:** Participated in the development of the company's first project to adopt hexagonal architecture, multi-tenancy, and cloud deployment with .NET 7/8, React, TypeScript, Docker, Redis, and other technologies, from design to implementation, serving more than 10 tenants in production and serving as the technical foundation for the ERP modernization.
 - **ERP Modernization:** Took technical ownership of the ERP Qprof modernization toward a microservices architecture, contributing to implementation and system design decisions for more than 5 services, ensuring long-term scalability and maintainability.

- **Software Development Apprentice: Jun/2022 – Apr/2023 (10 months)**

- First professional experience in the technology field, learning in practice how software development works in a real product. Worked on developing and maintaining platform features using ASP.NET Web Forms applications and Oracle PL/SQL routines.

Tech Stack: C#, ASP.NET, .NET, .NET Framework, React, TypeScript, JavaScript, Node.js, Python, Oracle, PL/SQL, Docker, Redis, RabbitMQ, REST APIs, Swagger, xUnit (Unit Tests), Git, Azure DevOps

Engineering Practices & Patterns: System Design, SOLID, Clean Code, Clean Architecture, Hexagonal Architecture, Microservices Architecture

Education

- **Bachelor's Degree in Computer Science:** FURB – Regional University of Blumenau (Brazil). Dec/2025 (5 years).
- **Languages:** Portuguese (native), English (intermediate) and German (basic).
